

PRESS RELEASE

## **Talesun wins 300-MW Solar Project from China Merchants New Energy Group**

**Munch 27th August 2013: Zhongli Talesun Solar, a leading international producer of high quality solar modules and cells, is to deliver a turnkey solar park with a 300 MW capacity to China Merchants New Energy Group. The handover is set for as early as the fourth quarter of 2013, in the Chinese provinces Xinjiang and Jiangsu. The company is thereby consolidating its new direction as a full-service supplier in the global solar market.**

With the sale of a turnkey 300 MW solar power plant to the China Merchants New Energy Group Ltd, Zhongli Talesun Group sees a strong validation of its new strategic direction: At the beginning of the year the company announced that it was strengthening its focus on the acquisition of project rights, on project development, and on the sale of turnkey solar installations. Talesun will hand over the 300-MW plant in the final quarter of 2013.

“Through this major project, together with our partner, China Merchant New Energy Group, we are attaining new heights in the financing, development, and execution of large-scale solar power plants”, says Wang Baixing, Chairman of the Sci-Tech Group and founder of Zhongli Talesun. “Projects such as this strengthen our innovative mode of development and increase our possibilities in terms of global financing and the realization of photovoltaic power plants.”

### **Past Experience with Fully Integrated Projects**

Since its formation in 2010, the manufacturer has gained significant experience in the realization of turnkey solar parks. The company has installed many rooftop installations with double-digit megawatt capacity. In 2012 Talesun developed PV projects with a total capacity of 260 MW, both at home and abroad. By August 2013, the company has over 620 MW in construction, with a further 100 MW to be installed by the middle of this month. The aim by year-end 2013 is to have 500 MW of capacity connected to the grid and handed over to customers.

“2013 represents a significant milestone for our company. Talesun will successfully realize PV projects with a cumulative worldwide performance of more than one gigawatt“, continues Wang Baixing. “We are innovative in the development of all our projects and ensure that all are

profitable in their own right. In this way we are playing our role in the new energy age and helping to provide a clean environment in many countries throughout the world.”

#### **About Talesun**

Talesun is an internationally operating premium producer of solar modules and cells for the private and industrial sectors. The company's 210,000m<sup>2</sup>, fully automated production plant in the Chinese province of Jiangsu will reach a production capacity of 2 GW by the end of 2013. Talesun has subsidiaries in Hong Kong, Singapore, Munich and San Jose.
